# LANGUAGE IS NOT LANGUAGE PROCESSING

Marten van Schijndel

May 2020

Department of Linguistics, Cornell University

VAN SCHIJNDEL MAY 2020 1 / 63

CL/NLP often aim to create models of language comprehension (NLI, parsing, information extraction, etc)

Often, language models are trained on large amounts of text And these are the starting point for more complex models Or they are used for cognitive modeling

VAN SCHIJNDEL MAY 2020 2 / 6

### TWO POTENTIAL PROBLEMS

Model biases may not align with human comprehension biases

→ Models may not learn human comprehension during training

All language data comes from production not comprehension (though annotations provide comprehension cues)

→ Comprehension signal may not be present in the produced data

In this talk, I explore these two possible problems with our current modeling paradigm

VAN SCHIJNDEL MAY 2020 3 / 6:

#### **OVERVIEW**

Part 0: Background

Part 1: Magnitude probing

Part 2: World knowledge probing

Part 3: Production / comprehension mismatch

VAN SCHIJNDEL MAY 2020 4 / 63

### PART 0: BACKGROUND

Neural networks have proven especially successful at finding *linguistically accurate* language processing solutions.

VAN SCHIJNDEL MAY 2020 5 / 6

## NNS ARE OFTEN TRAINED ON A WORD PREDICTION TASK

VAN SCHIJNDEL MAY 2020 6 / 63

### NNS ARE OFTEN TRAINED ON A WORD PREDICTION TASK

VAN SCHIJNDEL MAY 2020 6 / 63

### WHY WORD PREDICTION?

We can measure how unexpected a word is with surprisal

$$Surprisal(w_i) = -\log P(w_i \mid w_{1..i-1})$$
 (1)

Shannon, 1948, Bell Systems Technical Journal Hale, 2001, Proc. North American Assoc. Comp. Ling. Levy, 2008, Cognition

7 / 63

VAN SCHIJNDEL MAY 2020

## WHY WORD PREDICTION?

Surprisal indicates what the model finds unexpected/unnatural which can then be mapped onto human behavioral and neural measurements

- acceptability/grammaticality
- reading/reaction times
- neural activation

VAN SCHIJNDEL MAY 2020

### THIS IS KIND OF CRAZY!

We know frequency/predictability affect human language processing

However, many plausible explanations of human responses involve experience beyond language statistics

E.g., can language models learn intention from text alone? There may be some weak signal, but ...

VAN SCHIJNDEL MAY 2020 9 / 6:

# Part 1: Magnitude probing

van Schijndel & Linzen, 2018, *Proc. CogSci* van Schijndel & Linzen, in prep Humans experience a visceral response upon encountering garden path constructions

NNs model average stats and therefore average frequency responses.

Garden path responses exist in the tail.

VAN SCHIJNDEL MAY 2020 11 / 6:

# They exist in the tail because:

- the statistics are in the tail (predictability)OR
- 2 the response is unusual (reanalysis)

VAN SCHIJNDEL MAY 2020 12 / 63

The horse raced past the barn fell.

VAN SCHIJNDEL May 2020 The horse that was raced past the barn fell.

VAN SCHIJNDEL MAY 2020 13 /

VAN SCHIJNDEL MAY 2020 1

While human responses are framed in terms of explicit syntactic frequencies,

RNNs can predict garden path responses without explicit syntactic training.

van Schijndel & Linzen, 2018, *Proc. CogSci* Futrell et al., 2019, *Proc. NAACL* Frank & Hoeks, 2019, *Proc. CogSci* 

May 2020

15 / 63

Do RNNs process garden paths similar to humans?

Look beyond garden path existence to garden path magnitude

VAN SCHIJNDEL MAY 2020 16 / 63

### **MODELS**

WikiRNN:

Gulordava et al., (2018) LSTM

Data: Wikipedia (80M words)

SoapRNN:

2-layer LSTM (Same training parameters as above)

Data: Corpus of American Soap Operas (80M words; Davies, 2011)

VAN SCHIJNDEL MAY 2020 17 / 63

### THREE GARDEN PATHS

```
NP/S: The woman saw { the doctor wore a hat. that the doctor wore a hat.  
NP/Z: When the woman { visited her nephew laughed loudly.  
visited, her nephew laughed loudly.  
MV/RR: The horse { raced past the barn fell.  
which was raced past the barn fell.
```

VAN SCHIJNDEL MAY 2020 18 / 63

## SURPRISAL-TO-MS CONVERSION

$$RT(w_t) = \alpha S(w_t)$$

(2)

Smith & Levy, 2013, Cognition

VAN SCHIJNDEL MAY 2020 19 / 6

### PROBABILITY-TO-MS CONVERSION

$$RT(w_i) = \delta_0 S(w_i) + \delta_{-1} S(w_{i-1}) + \delta_{-2} S(w_{i-2}) + \delta_{-3} S(w_{i-3})$$
Smith & Levy, 2013, Cognition (3)

20 / 63

VAN SCHIJNDEL MAY 2020

### DERIVING THE ORIGINAL MAPPING

#### **Probabilities**

- Kneser-Ney trigram probabilities
- Estimated from British National Corpus (100M words)

# Reading Time Data (SPR; ignoring ET)

- Brown corpus
- 35 participants
- 5000 words / participant

### Generalized Additive Mixed Model

- mgcv package
- Factors: text position, word length × log-frequency, participant Smith & Levy, 2013, Cognition

VAN SCHIJNDEL MAY 2020

21 / 63

### **DERIVING THE NEW MAPPING**

#### **Probabilities**

- LSTM LM probabilities
- Estimated from Wikipedia/Soaps (80M words)

# Reading Time Data (SPR)

- 80 simple sentences (fillers)
- 224 participants
- 1000 words / participant

#### Linear Mixed Model

- lme4 package
- Factors: text position, word length × log-frequency, participant entropy, entropy reduction

VAN SCHIJNDEL MAY 2020

### LEARNED SURP-TO-RT MAPPING

Smith & Levy, 2013:

$$\delta_0 = 0.53 \; \delta_{-1} = 1.53 \; \delta_{-2} = 0.92 \; \delta_{-3} = 0.84$$

WikiRNN using Prasad & Linzen, 2019:

$$(\delta_0 = 0.04) \ \delta_{-1} = 1.10 \ \delta_{-2} = 0.37 \ \delta_{-3} = 0.39$$

SoapRNN using Prasad & Linzen, 2019:

$$(\delta_0 = -0.04) \; \delta_{-1} = 0.83 \; \delta_{-2} = 0.91 \; \delta_{-3} = 0.44$$

VAN SCHIJNDEL MAY 2020 23 / 63

### RNN GARDEN PATH PREDICTION

VAN SCHIJNDEL MAY 2020 24 / 6:

VAN SCHIJNDEL MAY 2020 25 / 63

### WORD-BY-WORD GARDEN PATH PREDICTION

Do RNNs garden path in a reasonable way?

VAN SCHIJNDEL MAY 2020 27 / 6

#### PARTS-OF-SPEECH PREDICTIONS

#### CONCLUSION

- Conversion rates are relatively similar, but all underestimate human effect
- Suggests human processing involves mechanisms outside occurrence statistics

(We will come back to this in Part 3)

VAN SCHIJNDEL MAY 2020 29 / 63

But how well can human responses be explained by text statistics? We know that RNNs track syntactic and semantic statistics. What about event representations?

VAN SCHIJNDEL MAY 2020 30 / 63

# Part 2: World knowledge probing

Davis & van Schijndel, 2020, *Proc. CogSci* Davis & van Schijndel, 2020, *Proc. CUNY* 

VAN SCHIJNDEL

(1) a. Context - Several horses were being raced.

b. Target - The horse raced past the barn fell.

Knowledge of the situation mitigates the garden path

VAN SCHIJNDEL MAY 2020 32 / 63

## CONTEXT: ONE KNIGHT EXISTS

Spivey-Knowlton et al., 1993, Canadian Journal of Experimental Psychology

VAN SCHIJNDEL MAY 2020 33 / 63

### **CONTEXT: ONE KNIGHT EXISTS**

Spivey-Knowlton et al., 1993, Canadian Journal of Experimental Psychology

Van Schijndel May 2020 34 / 63

## **CONTEXT: TWO KNIGHTS EXIST**

Spivey-Knowlton et al., 1993, Canadian Journal of Experimental Psychology

VAN SCHIJNDEL MAY 2020 35 / 63

## **CONTEXT: TWO KNIGHTS EXIST**

Spivey-Knowlton et al., 1993, Canadian Journal of Experimental Psychology

VAN SCHIJNDEL MAY 2020 36 / 63

#### (2)a. Context

- (i) 1NP - A knight and his squire were attacking a dragon. With its breath of fire, the dragon killed the knight but not the squire.
- (ii) 2NP - Two knights were attacking a dragon. With its breath of fire, the dragon killed one of the knights but not the other.

#### b. Target

- (i) Reduced - The knight killed by the dragon fell to the ground with a thud.
- (ii) Unreduced - The knight who was killed by the dragon fell to the ground with a thud.

VAN SCHLINDEL May 2020 37 / 63

- Models: 5 LSTMs with shuffled context
   5 similar models but with intact context
   trained with different random seeds on 80M Wikipedia
- Test data: Spivey-Knowlton et al. (1993) Trueswell & Tanenhaus (1991)

We sum the surprisal of verb+by

VAN SCHIJNDEL MAY 2020 38 / 63

## ALL MODELS PREDICT GARDEN PATH EFFECT

VAN SCHIJNDEL MAY 2020 39 / 63

## REFERENCE MITIGATES GARDEN PATH

VAN SCHIJNDEL MAY 2020 40 / 63

VAN SCHIJNDEL May 2020 41 / 63

#### (3)Context a.

- (i) Past - Several students were sitting together taking an exam in a large lecture hall earlier today. A proctor noticed one of the students cheating.
- (ii) Future - Several students will be sitting together taking an exam in a large lecture hall later today. A proctor will notice one of the students cheating.

#### b. Target

- (i) Reduced - The student spotted by the proctor received/will receive a warning.
- (ii) Unreduced - The student who was spotted by the proctor received/will receive a warning.

VAN SCHLINDEL May 2020 42 / 63

## TEMPORAL CONTEXT MITIGATES GARDEN PATH

Van Schijndel May 2020 43 / 63

Van Schijndel May 2020 44 / 63

## **CONCLUSIONS**

- Models learn tense information robustly
- Referential context and definiteness are less robust
- RNNs learn enough about discourse to mitigate garden paths (only when trained with intact discourse)
- Event knowledge is encoded in text.
   Understandable since we talk about the world, but still crazy

VAN SCHIJNDEL MAY 2020 45 / 63

The problem with garden paths:

The human response correlates with the occurrence statistics

Is there a case where the learned occurrence statistics don't reflect the observed response?

VAN SCHIJNDEL MAY 2020 46 / 63

Part 3: Production / comprehension mismatch

Davis & van Schijndel, 2020, Proc. ACL

May 2020

VAN SCHIJNDEL

RNNs have an observed recency bias

Idea: Maybe that prevents them from learning known human biases

Recency confounds attachment height

van Schijndel

## RELATIVE CLAUSE ATTACHMENT

- (4) a. Andrew had dinner yesterday with the <u>nephew</u> of the teachers that was divorced.
  - b. Andrew had dinner yesterday with the nephews of the teacher that was divorced.

VAN SCHIJNDEL MAY 2020 49 / 63

# **HUMANS ATTACH LOW/LOCAL/RECENT**

Fernández, 2003, Bilingual Sentence Processing

VAN SCHIJNDEL MAY 2020 50 / 63

- Models: 5 Gulordava et al. (2018) LSTMs trained with different random seeds
- Test data: Fernández (2003), Carreiras & Clifton Jr. (1993), POS templates

VAN SCHIJNDEL MAY 2020 51 / 63

# ENGLISH MODELS ATTACH LOW/LOCAL/RECENT

VAN SCHIJNDEL MAY 2020 52 / 63

## **ENGLISH ATTACHMENT IS UNUSUAL**

## Local

# Non-local

Afrikaans	Japanese
Arabic	Norwegian
Croatian	Persian
Danish	Polish
Dutch	B. Portuguese
English	Romanian
French	Russian
German	Spanish
Greek	Swedish
Italian	Thai

Brysbaert & Mitchell, 1996/2008, Quarterly Journal of Experimental Psychology Section A

VAN SCHIJNDEL MAY 2020 53 / 63

- Models: 5 Gulordava et al. (2018) LSTMs trained with different random seeds on 80M tokens of Spanish Wikipedia
- Test data: Fernández (2003), Carreiras & Clifton Jr. (1993), POS templates

Van Schijndel May 2020 54 / 63

# SPANISH MODELS ATTACH LOW/LOCAL/RECENT

VAN SCHIJNDEL MAY 2020 55 / 63

Maybe the recency bias prevents them from learning HIGH attachment?
Experiment:
Manipulate attachment preference in synthetic training corpus

VAN SCHIJNDEL MAY 2020 56 / 63

## SYNTHETIC TRAINING CORPUS

- (5) a. DN(PDN)(Aux)V(DN)(PDN)
  - b. D N Aux V D N 'of' D N 'that' 'was/were' V
- (6) a. The nephew near the children was seen by the players next to the lawyer.
  - b. The gymnast has met the hostage of the women that was eating.

VAN SCHIJNDEL MAY 2020 57 / 63

 Models: 5 2-layer unidirectional LSTMs trained with different random seeds

• Training data: Synthetic corpus

• Test data: 300 ambiguous synthetic RCs

VAN SCHIJNDEL MAY 2020 58 / 63

## HIGH ATTACHMENT IS EASY TO LEARN!

- Training: All RCs attach HIGH unambiguously Vary number of RCs Result: 20/120k produces HIGH bias at test
- ② Training: 10% of data has unambigous RCs Vary HIGH proportion Result: ≥ 50% HIGH produces HIGH bias at test

VAN SCHIJNDEL MAY 2020 59 / 63

VAN SCHIJNDEL MAY 2020 60 / 63

## WHAT PROPORTION OF SPANISH DATA IS HIGH?

- Wikipedia: LOW is 69% more common
- Newswire (AnCora; UD): LOW is 21% more common

Note that it's still possible they contain HIGH bias, just not in RCs

61 / 63

VAN SCHIJNDEL MAY 2020

## CONCLUSION

- Supports idea that production and comprehension have different distributions
   e.g., Kehler and Rohde (2015, 2018)
- RNNs won't learn human comprehension from text alone
- Provides explanation why increasing training data ceases to help
- Provides explanation for why training on cognitive signals improve model accuracy (Klerke et al., 2016; Barrett et al., 2018)

VAN SCHIJNDEL MAY 2020 62 / 63

## THANKS!

Presentations at CUNY 2020, CogSci 2020, and ACL 2020!

**CUNY 2020** 

Recurrent neural networks use discourse context in human-like garden path alleviation

CogSci 2020

Interaction with context during recurrent neural network sentence processing

ACL 2020

Recurrent neural network language models always learn English-like relative clause attachment

VAN SCHIJNDEL MAY 2020 63 / 63
